

**At C.A.D.E we provide a complete service:**

**The Installation & Maintenance of conventional and addressable Fire Alarm Systems.**

- . Fault Finding**
- . Service to BS5839**
- . Installation of New Systems**
- . Extensions to Existing Fire Systems**

We have just successfully completed extending an existing fire alarm system at a nursing home for the elderly with three generation parts fitted to the same system.

This was requested at the first initial site visit on how we could possibly save our client a great expense and yet still provide a fully functional fire system updated to the new regulations.

From our first visit with you we try to give you the best professional advice possible which we continue to give all through the stages of our contract and more with our after sales care and technical support.
